

A timeless privacy fence design utilizing extra thick cedar boards, and a sandwich style framing system. Our exclusive design gives unparalleled rot protection and moisture drainage, while overlap boards provide extra strength and beauty. This flow-through bottom rail design easily adds 15 years to the life of a cedar fence.

This hand-built fence can be constructed at any height and is built to suit your property. For instance, fence sections can be equally sized as they are not fixed at 8' long, and they can be sloped to keep the fence tighter to the ground on steep hills.

Optional upgrades:

Continuous top rail

Oversize 1x8" boards

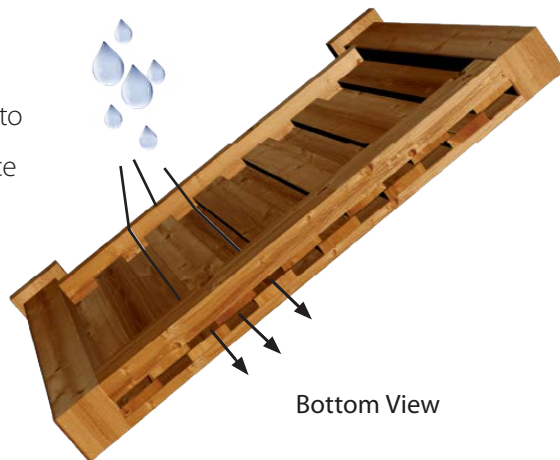

Staining services available

Our overlapping Flow-Thru board layout allows water and moisture to drain down the length of the fence and out the bottom; reducing the chance for rot, resulting in a much longer life-span than other fences.

Key-lock latches are available.

Padlock-able latch

Standard hinges
